

**A unique opportunity
in the interest of quality professional education**

School of Accounting • University of Florida

Our Purpose...

...to establish a separate, experimental School of Accounting at the University of Florida. The school is to be a national model and innovate a program that responds to the needs of the public, business and the accounting profession.

Our Primary Objective...

...to graduate persons who have the technical and general education they need to be effective professional accountants. This requires a higher level and different scope of education than is found in typical undergraduate programs. It also requires an educational environment that is closely identified with the practice of accounting and one that inculcates professional values and responsibilities. The school will provide this kind of educational environment and level of quality.

Faculty (1976-77)
